ABSTRACT

This paper describes regeneration of water, origin of universe, light and love in human made entities.

INTRODUCTION

Regeneration of water: The concept of regeneration comes from fire. If fire is burning a piece of material, then the fire could be regenerated by simply adding more material to the existing fire (obviously that which can be burnt). Adding more material regenerates fire. Suppose, there is a group of positive charges and we add a mass (with no charge) to it. Now, if we make this mass into positive charge, (mass with positive charge and the group), then suddenly the volume occupied by the positive charges will increase due to repulsion. This concept could be taken to water. If we add water to more water and induce positive charge in the water, suddenly this water would give rise to more water, thus regenerating water due to repulsion between positive charges. Thus, due to repulsion, regeneration of water takes place. An example of regeneration due to repulsion can be found in air where regeneration due to repulsion takes place. If this air is pumped into water, and more and more air is pumped into water, then regeneration of water will take place as described above.

Origin of universe: Light energy travels in different mediums, air, water etc. When light is travelling through a medium, say air, a point is reached after which it cannot travel further.

It gets converted into kinetic energy and then potential energy and finally into mass. The conversion of light energy into kinetic energy gives rise to systems like comets, meteorites etc. The conversion into potential energy gives rise to planetary systems. Finally, the conversion into mass gives rise to stars like the sun etc. Origin of the universe is nothing but a phenomenon of light.

Light in human made entities: Light in human made entities refers to the center element of the entity or object. For example in a company, the lowermost workers (peons) are the center elements as they interact with everyone. In a university, dean or principle is the center element as they are responsible to everyone. In a car, tyres are the center elements as they bear the pressure of everything in the car.

Love in human made entities: Love in human made entities refers to the most fundamental or key element of the entity or object. For example in a company that provides service, board of directors are the key element as they provide all kinds of services. In a university, teachers are the key elements as they provide education which is the function of the university. Similarly, in a car, steering is the fundamental element as it accounts for the motion of the car which is the function of the car.
