INTRODUCTION

User living could be differentiated into three types:

-) Directional
-) Definite
-) Determined

This differentiation could be linked to standard of living. A high standard of living is linked to definite way of living. A medium standard of living is linked to directional way of living. A low standard of living is linked to determined way of living. The three types of living are described below:

Directional: When a user is living for a purpose or a cause, this way of living of user is termed as directional. This cause or purpose could be anything from family to job promotion. It could often be associated with medium standard of living.

Definite: When a user is living for small things such as waking up, sleeping, arriving on time etc., it could be termed as definite way of living. It could often be associated with high standard of living.

Determined: When a user is living for only pleasure, it could be termed as determined way of living. It could often be associated with low standard of living.

User engagement [1], User reaction [2] and User living together make up the life of users.

Convenience

Whenever two users who have the same direction in terms of actions, thoughts and behavior are in each other's company, both of them experience convenience. An example is a group of people working on the same project such that they want to achieve the same set of goals.
